

ÖLFLEX® CONNECT System Solutions

The perfect connection of
product and service

WE CONNECT HIGH-QUALITY PRODUCTS WITH FIRST-CLASS SERVICE

Cable chain, cable assembly or servo assembly – with us and ÖLFLEX® CONNECT, you get the right product and the right service. We accompany your projects from start to finish and are at your side every step of the way, starting with the initial requirement analysis and the optimisation of your connection solutions up to the final quality check. This way, you simplify your own processes and are ready to meet future challenges thanks to individual solutions and environmentally friendly materials. From single cores to complex system solutions – with ÖLFLEX® CONNECT, you get a high-quality product and outstanding service – and you also save time and costs!

CUSTOMISED SOLUTIONS: ÖLFLEX® CONNECT CONNECTION SOLUTIONS IN USE

Glowing glass dragons The two largest glass dragons in the world hang at a luxury resort on the Chinese island of Saipan. Each dragon is 32 metres long and glows in all colours of the rainbow thanks to hidden LED chips. The custom connection solutions for the giants are made by LAPP. The skeleton, which forms the dragons' shape and is completely passable, contains almost 7,000 EPIC® connectors, the halogen-free ÖLFLEX® CLASSIC 110 H control cable and MULTI-STANDARD SC 2.1 power and control cable with PVC shielding as well as SKINTOP® cable glands. A special requirement: the dragons and our connection solutions can withstand earthquakes of up to a magnitude of seven on the Richter scale.

CUSTOMISED SOLUTIONS: ÖLFLEX® CONNECT CONNECTION SOLUTIONS IN USE

Revolving art in Prague The State Opera in Prague, one of the most important opera houses in Europe, has a unique revolving stage. Equipped with connection solutions by LAPP, this stage technology makes opulent productions possible. The revolving stage offers special technical possibilities: it does not only revolve but can also be raised. In addition to ÖLFLEX® power and control cables, UNITRONIC® data cables and EPIC® signal connectors were used as well as ETHERLINE® cores and components for the network technology. The connection solutions have to be particularly safe, which is why mainly halogen-free cables with very good fire protection properties were used in this project.

YOUR ADVANTAGES AT A GLANCE

With us, you don't only get the right connection solution, but also benefit from other advantages with our service:

You save time

... choosing components
... through easy Plug&Play solutions
... and because you will find everything you need with us.

You have lower costs

... because you can skip creating bills of materials and drawings
... you need less storage space because we deliver just in time
... and you don't need in-house production.

You simplify your processes

... through our standardised components
... a simple ordering process
... and thorough quality control.

With us, you are advanced

... thanks to high-quality documentation
... the compatibility of the materials chosen
... and customisable solutions.
